Multiorbit, Multiprovider Network Management System

Competitive Advantage

Consistent management of multivendors with

Benefits

Significant OPEX reduction & Rapid ROI.

Simplifies entire maintenance process & reduces need to management or multivendor propietary platform or

Ensure optimization of service, orchestration, SLA, QoS and time to resolution.

Minimize OPEX by automation and AI.

individual dish.

- Improve Availability & Resilency automatically.
- Cloud enable with levels of classified information or on premises.

Enables network operators to have full control as VNO in multiorbit network.

- Automates management, minimizing time and effort.
- Restful API driven open to have M2M integration.

Maximizes network performance.

Flexible hierarchy of network to scale and manage.

User access limited visibility for customers or special users.

Features

Manage large groups of Starlink Dish as a traditional NMS.

Measure and store metrics such as Service Level Agreement, time to resolution, cost, revenue, and profit.

Automatically raises alarms when a problem is detected in any VSAT.

Operator-determined Rx/Tx, or data, thresholds & Alarms or notifies accordingly.

Provides recovery, service enable, pause or disable per dish.

- Powerful terminal recovery tools for network operators.
- A completely automated system, with multivendor, multiorbit and integrable by APIs.
- Automated mode measures all required parameters to ensure the quality of service and SLA with perpetual storage.
- Customizable Automated SLA analysis and report generation in Excel & PDF with plots and execution summary for users customers & management.
