

CAPEX or SaaS

THE MOST RESILIENT INTERFERENCE CANCELER

Satellite & terrestrial interference detection and elimination, seamlessly and efficiently. Developed for LEO, MEO & GEO constellations.

CAPEX or SaaS

Competitive Advantage

Achieve maximum service availability and robustness.

For satellite-to-ground links for GEO and NGSOs.

It effectively cancels all kinds of interference in realtime (CW, modulated, and terrestial).

It does not require additional systems to operate.

Non-ITAR for all use cases and scenarios.

It can be used with satellite terminals from any vendor, any antenna, or any constellation.

Developed in-house; we have the expertise to improve and adapt CleanRF to customers' needs.

Features

- In-line RFI canceler.
- Cancels both "unmanaged" and "managed" interference sources.
- Provides protection from RFI at the receiving end of the satellite link, multi-platform integration.
- Isolates and removes RF interference from the wanted signal.
- The RFI detection module identifies the component and features of the interfering signal.
- CleanRF does not require any modification of the on-site equipment; it will just add a stand-alone COTS box.
- Cancels modulated broadband or narrow interferences.
- Licenseable as a firmware software, integrable in third-party hardware.

Benefits

- Easiest and most accurate interference canceler.
- Detects and removes RF instantly.
- Best-in-class link protection.
- Provides an additional layer of security to the RF link.
- Fully automated solution and parameters, adapting to different scenarios.
- Ideal for protecting Government's critical communications.
- Global 24/7 support.
- We can train your team anywhere in the world.
- Automated operation scaning, multi-carrier scenarios.
